CS 1300 - Homework 5

GitHub repository: https://github.com/mimifantastic/hw5

Section 1: Multiple Choice

No.	Answer
1	**b) B**
2	**b) "odd"**
3	**b) The conditions are in the wrong order - amount > 100 should come before amount > 50**
4	**b) value_if_true if condition else value_if_false**
5	**a) True**
6	**a) Valid size**
7	**b) "blue" is a non-empty string (truthy), so the or expression is always True**
8	**b) It removes leading and trailing whitespace**
9	**c) An off-by-one error**
10	**b) 2-3 levels**

Section 2: True or False

No.	Answer
1	**T**
2	**F**
3	**T**
4	**F**
5	**F**

Section 3: Python Programs

Problem 1: Movie Ticket Pricing

problem1_movie_ticket.py

```
# Calculate the ticket price using age and matinee status.
def main():
    try:
        age = int(input("Enter your age: "))
    except ValueError:
        print("Error: age must be an integer.")
        return
    if age < 0:
        print("Error: age must be non-negative.")
        return

    answer = input("Is this a matinee showing? (yes/no): ")
    answer = answer.strip().lower()
    if answer not in ["yes", "no"]:
        print("Error: enter yes or no.")
        return
